

ROMANIAN ENERGY REGULATORY AUTHORITY

GENERAL DIRECTION OF ELECTRICITY MARKET

REPORT ON RESULTS OF MONITORING THE ROMANIAN ELECTRICITY MARKET JANUARY 2017

- This document represents an unauthorised translation of the Romanian document -

ANRE makes all the necessary efforts to present within the here above mentioned document, as accurately and concisely as possible, the data based on the legal entities reports. This document published by ANRE is for information purpose only. ANRE is not and will not be under any circumstances legal responsible for any inadvertences regarding the information presented within the document or for the improper way the information is used

VI.	EXPLANATIONS AND ABBREVIATION	39

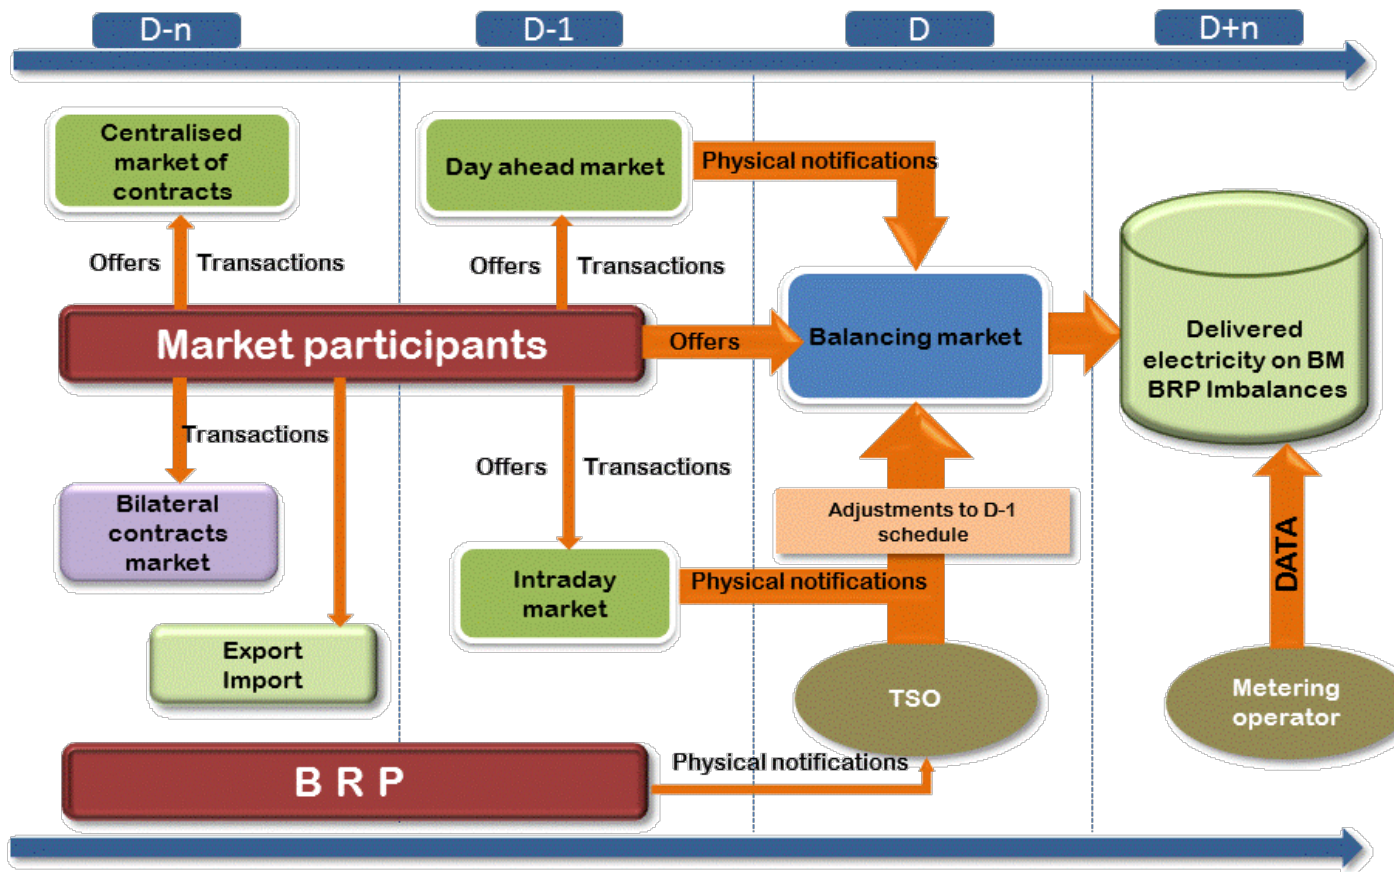

I. MAIN EVENTS IN THE DEVELOPMENT OF THE ROMANIAN ELECTRICITY MARKET

- GD 365/1998 – vertically integrated monopol – RENEL – was split into separated distribution and supply companies (SC Electrica SA) and generation companies (SC Termoelectrica SA and SC Hidroelectrica SA) were established within a new company - CONEL SA. Two other electricity generators (SN Nuclearelectrica SA and RAAN) were separately established;
- transmission, system services and market administration were separately organised, within CONEL SA;
- the relationships between parties within the electricity sector were settled based on contracts;
- GD 122/2000 – electricity market opens at 10%;
- GD 627/2000 – CONEL holding is dissolved;
- September 2000 – launch of the compulsory electricity spot market in Romania, administrated by OPCOM and organized based on pool model;
- GD 1342/2001 – SC Electrica SA splits in 8 subsidiaries for electricity distribution and supply;
- GD 1524/2002 – SC Termoelectrica SA reorganizes in several separate legal entities for generation;
- July 2005 – launch of the new market model, based on:
 - voluntary spot market, with both sides offers and bilateral settlement;
 - compulsory balancing market, with TSO as single counterparty;
 - financial responsibilities of the balancing are allocated to the BRP;
- GD 644/2005 – electricity market opens at 83.5%;
- December 2005 – launch of the green certificates market;
- December 2005 – launch of the centralized market for bilateral contracts;
- March 2007 – launch of the centralized market for partially standardized bilateral contracts with continuous negotiation;
- GD 638/2007 – fully opening of electricity and gas markets;
- July 2007 – rules for capacity market have been established;
- July 2008 – launch of the mechanism of direct debit and guarantee for electricity transactions on the day-ahead market (OPCOM as central counterparty);
- August 2008 – process of legal unbundling of distribution and supply companies has been concluded;
- August/December 2010 – launch of bilateral coordinated auctions for capacity allocation on interconnections with Hungary and Bulgaria;
- July 2011 - launch of the intraday market;
 - GD 930/2010 – SC Electrica Furnizare SA had been established through merger of the former last resort suppliers Electrica Furnizare Muntenia Nord, Electrica Furnizare Transilvania Nord and Electrica Furnizare Transilvania Sud;
- June 2012 – a new entity obtains the generation license and enters on the electricity market - Complexul Energetic Oltenia SA, established in a dual system through merger of the former SNLO Tg. Jiu, Complexul Energetic Turceni, Complexul Energetic Rovinari and Complexul Energetic Craiova (GD 1024/2011);
- July 2012 – the Law of electricity and natural gas no. 123/2012 has enter into force;
- September 2012 – the application of the first stage from the timetable of phasing out of regulated electricity tariffs to final customers who choose not to exercise their eligibility rights, in accordance with the obligations assumed by the Romanian Government in relation with the IMF, World Bank and European Commission;
- October 2012 – the Law no. 160/2012 regarding the organisation and operation of the Romanian Energy Regulatory Authority has entered into force;
- November 2012 - a new entity obtains the generation license and enters on the electricity market - Complexul Energetic Hunedoara SA, established through merger of the former Electrocentrale Deva and Electrocentrale Paroseni (GD 1023/2011);
- December 2012 – launch of the organised electricity market for the large customers;
- July 2013 – launch of centralized market trading with continuous double negotiation of bilateral contracts for electricity;

- August 2013 – removal of injection transmission tariff for the imported and respectively of the extraction transmission tariff for the exported quantities, and of the corresponding system services;
- December 2013 – removal of the export tariffs applied by the electricity market operator;
 - certification with conditions for CNTEE Tranelectrica SA as an independent transmission and system operator;
 - application of last stage of the phasing out calendar for removal the regulated tariffs applied to the final nonhousehold clients who do not use their eligibility rights;
- August 2014 – CNTEE Tranelectrica SA certification as NES transmission system operator following the „independent system operator” model;
- October 2014 – entry into force of the Law no. 127/2014 for amending the Law no. 123/2012;
- November 2014 – the launch of the CZ-SK-HU-RO market coupling project, that encompasses the DAM markets from the Czech Republic, Slovakia, Hungary and Romania;
- January 2015 – entry into force of the new centralized market for bilateral contracts with its components: Extended Auctions Mechanism (CMBC–EA), Continuous Negotiation Mechanism (CMBC–CN), Fuel Processing Mechanism (CMBC–FP);
- February 2015 – implementing the centralized market for universal service;
- November 2016 - entry into force of the Law no. 203/2016 amending the Law no. 123/2012 on electricity and natural gas.

II. WHOLESALE ELECTRICITY MARKET

1. Structure of the wholesale electricity market

- Markets administrated by Opcom SA (the electricity market operator)
- Market administrated by CNTEE Tranelectrica SA (balancing market operator)
- The structure is presented within 'Transactions on the wholesale market' table – chapter 4

2. Participants on the wholesale electricity market

The market participants*) acting on the electricity market in January 2017 are presented below split into categories:

No.	Category	No.	Category
A Electricity generators on classic sources operating dispatching units		C Electricity generators on biomass source operating dispatching units	
1	Bepco SRL	1	Bioenergy Suceava SRL
2	CET Arad SA		
3	CET Govora SA	D Electricity generators on solar source operating dispatching units	
4	CE Hunedoara SA	1	Blue Sand Investment SRL
5	CE Oltenia SA	2	Caracal Solar Alpha SRL
6	Contour Global Solutions SRL	3	Casa Crang SRL
7	Ecogen Energy SA	4	Chie Solar SRL
8	Electrocentrale București SA	5	Corabia Solar SRL
9	Electrocentrale Constanța SA	6	Cujmir Solar SRL
10	Electrocentrale Galați SA	7	Delta & Zeta Energy SRL
11	Electro Energy Sud SRL	8	Ecosfer Energy SRL
12	Enet Focsani SA	9	Eye Mall SRL
13	Gas Energy Ecotherm SA	10	Fort Green Energy SRL
14	Lukoil Energy & Gaz Romania SRL	11	Foton Epsilon SRL
15	Modern Calor SA	12	Gama & Delta Energy SRL
16	OMV Petrom SA	13	GPSB Solaris 48 SRL
17	Rulmenti SA	14	Greenlight Solution SRL
18	SNGN Romgaz SA	15	Green Vision Seven
19	Termoficare Oradea SA	16	Izvor de Lumina SRL
20	Veolia Energie Iasi SRL	17	Kentax Energy SRL
21	Veolia Energie Prahova SRL	18	Lemar Grup SRL
22	Vest Energo SA	19	LJG Green Source Energy Alpha SA
		20	LJG Green Source Energy Beta SRL
		21	LJG Green Source Energy Gamma SRL
B Electricity generators on wind source operating dispatching units		22	Long Bridge Millennium SRL
1	Alizeu Eolian SA	23	Mar-Tin Solar Energy SRL
2	Alpha Wind SRL	24	Poteli Solar SRL
3	Arima Development SRL	25	Power L.I.V.E. One SRL
4	Blue Line Energy SRL	26	RA-RA PARC SRL
5	Blue Planet Investments SRL	27	Romkumulo SRL
6	Bralia Winds SRL	28	Simico Prod Factory SRL
7	Bridgeconstruct SRL	29	Solar Electric Frasinet SRL
8	Catalan Electric SRL	30	Solar Future Energy SRL
9	CAS Regenerabile SRL	31	Solaria Green Energy SRL
10	Cernavoda Power SRL	32	Solprim SRL
11	Corni Eolian SRL	33	Spectrum Tech SRL
12	Crucea Wind Farm SRL	34	Studina Solar SRL
13	Dan Holding MGM SRL	35	Sun Energy Complet SA
14	Eco Power Wind SRL	36	Tis Energy SRL
15	Ecoenergia SRL	37	Tinmar Green Energy SRL
16	EDPR Romania SRL	38	Vanju Mare Solar SRL
17	Electrica Serv SRL	39	Varokub Energy Development SRL
18	Electricom SA	40	VIS Solaris 2011 SRL
19	Elektra Green Power SRL	41	Vrsh Pro Investments SRL
20	Elektra Wind Power SRL	42	WDP Development RO SRL
21	Enel Green Power Romania SRL	43	Xalandine Energy SRL
22	Energia Verde Ventuno SRL	44	XPV SRL
23	Enex SRL		
24	Eol Energy Moldova SRL	E Electricity generators on hydro source operating dispatching units	
25	Eolian Center SRL	1	Hidroelectrica SA
26	Eolica Dobrogea One SRL		
27	EP Wind Project (ROM) SIX SA	F Electricity generator on nuclear source operating dispatching units	
28	Eviva Nalbant SRL	1	SN Nuclearelectrica SA
29	Ewind SRL		
30	General Concrete Cernavoda SRL	G Transmission System Operator	
31	Green Energy Farm SRL	1	CNTEE TRANSELECTRICA SA
32	Ground Investment Corp SRL		
33	Holrom Renewable Energy SRL	H Market Operator for DAM, Intra-Day, Centralised Markets - CMBC-EA, CMBC-CN, CMBC-FP, CM-OTC, CMUS	
34	Horia Green SRL	1	OPCOM SA
35	Intertrans Karh SRL		
36	Kelavent Charlie SRL	I Distribution operators	
37	Kelavent Echo SRL	1	Distributie Energie Oltenia
38	Land Power SRL	2	Delgaz Grid
39	LC Business SRL	3	E-Distributie Banat
40	M&M 2008 SRL	4	E-Distributie Dobrogea
41	Mireasa Energies SRL	5	E-Distributie Muntenia
42	OMV Petrom Wind Power SRL	6	SDEE Muntenia Nord
43	Ovidiu Development SRL	7	SDEE Transilvania Nord
44	Peștera Wind Farm SRL	8	SDEE Transilvania Sud
45	Romconstruct Top SRL		
46	Sibinara Wind Farm SRL	J Suppliers of Last Resort	
47	Smart Clean Power SRL	1	CEZ Vanzare SA
48	Smartbreeze SRL	2	ENEL Energie SA
49	Soft Grup SRL	3	E.ON Energie Romania SA
50	Tomis Team SRL	4	ENEL Energie Muntenia SA
51	Ventus Renew Romania SRL	5	Electrica Furnizare SA
52	Wind Park Invest SRL		
53	Windfarm MV I SRL		
54	VS Wind Farm SRL

*) The electricity market participants report to ANRE technical/commercial data according to the *Methodology of wholesale electricity market monitoring for assessing the competition level on market and preventing the abuse of dominant position*, approved by ANRE Order no. 35/2006 as well as to the *Methodology of retail electricity market monitoring*, approved by ANRE Order no. 60/2008. The table does not include the Balancing Responsible Parties (BRP). The BRP updated list is published on the Balancing Market Operator website - www.transelectrica.ro.

ANRE monitors the market activity of the generators with dispatchable units. According to the Regulation of scheduling the dispatchable generation units and consumption units, the considered generation units are:

- hydro generation group with installed power higher than 10 MW;
- thermal generation group (including biomass and nuclear) with installed power higher than 20 MW;
- wind, photovoltaic or internal combustion engine with installed power higher than 5 MW.

Electricity Suppliers acting exclusively on the wholesale market category include supplying license owners who act only on wholesale market and owners of a trading license issued according ANRE Order no. 13/2015 for approval the „General conditions associated to trading electricity license”.

3. Generation structure of National Energy System on resources types

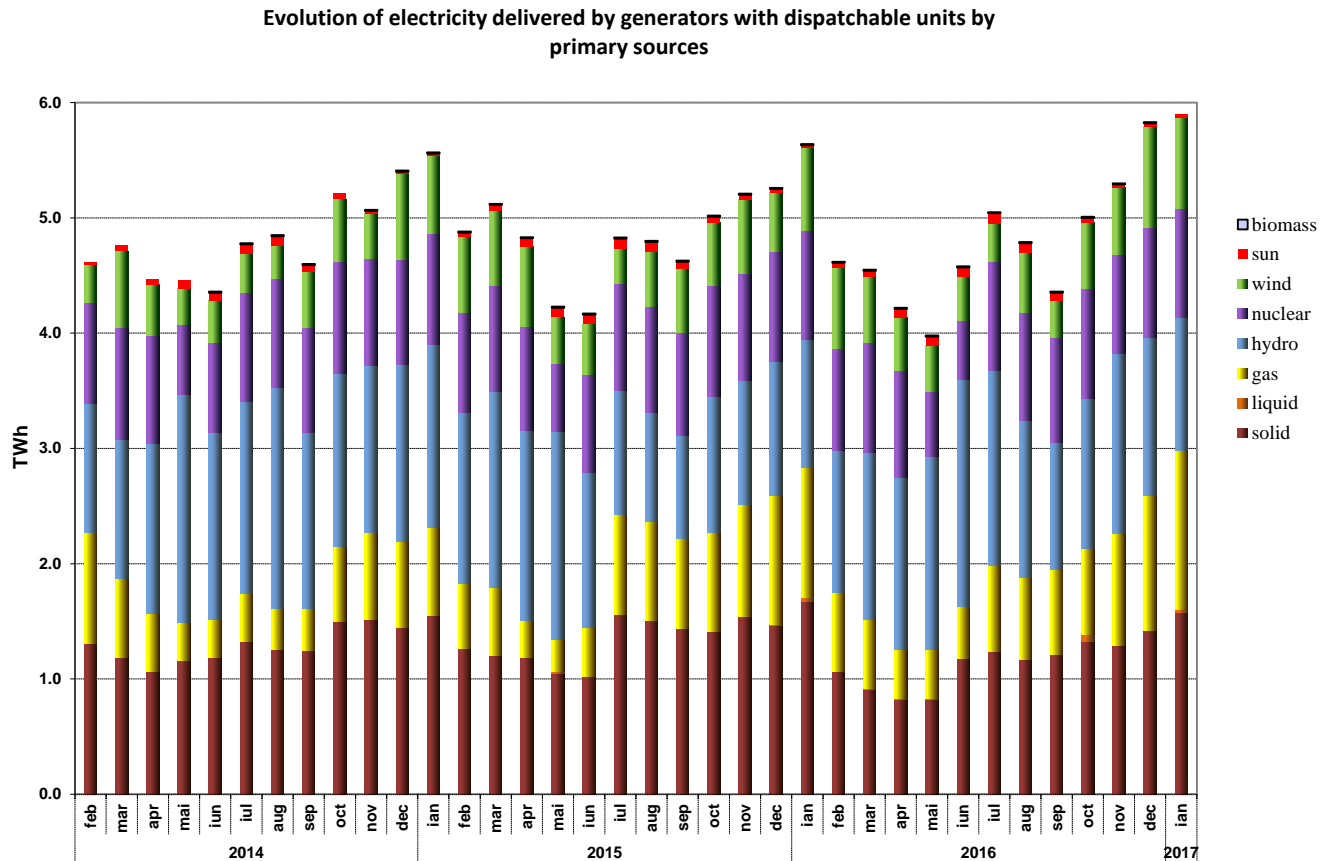

Source: Monthly reports of generators – processed by MG

The electricity generated from hydro resources and the energy stored in the main water reservoirs is directly correlated. The following graph presents the evolution of daily amounts of energy storage during January 2017 compared to the daily values of the last 6 years and compared to minimum, maximum and median values from 2000-2009.

Source: Monthly reports of S.C. Hidroelectrica S.A. – processed by MG

The evolution of delivered electricity structure, during the last 3 years, is the following:

Source: Monthly reports of generators – processed by MG

The following table presents the main data regarding the physical balance of electricity for January 2017 compared to data for similar period of 2016:

Nr. Crt.	INDICATOR	UM	Jan 2016	Jan 2017	%
0	1	2	3	4	5=4/3*100
1	Generated electricity	TWh	6.08	6.33	104.11
2	Delivered electricity	TWh	5.64	5.90	104.61
3	Import	TWh	0.23	0.17	73.92
4	Export	TWh	0.87	0.74	85.06
5	Internal consumption (2+3-4)	TWh	4.99	5.33	106.82
6	Consumption of household customers:	TWh	1.16	1.19	102.59
6.1	on Universal Service regime	TWh	1.16	1.13	97.42
6.2	on the competitive market*	TWh	-	0.06	-
7	Consumption of non-households customers:	TWh	2.94	3.11	105.79
7.1	on US and last resort regime	TWh	0.17	0.13	76.47
7.2	on the competitive market	TWh	2.77	2.98	107.59
8	Transmission–Injection component	TWh	5.55	5.78	104.15
9	Transmission–Extraction component	TWh	4.95	5.25	106.06
10	Actual transmission grid losses	TWh	0.09	0.09	100.00
11	Heat generated for delivery	Tcal	2155.93	2282.49	105.87
12	Heat in co-generation	Tcal	1811.08	1734.98	95.80

*data on this category started to be collected separately in January 2017

Note: 1. The generated electricity and delivered electricity are presented according to the data reported by monitored generators, as they are defined as dispatchable in the Regulation of scheduling the dispatchable generation units and consumption units approved by the ANRE Order no. 32/2013;

2. Data shown in the table neither include the energy produced by the generators who do not own dispatchable units (positions 1 & 2) nor the energy delivered to the customers directly connected to the power plants (positions 6 & 7);

3. The imported/exported quantities do not comprise transits and cross-border exchange of CNTEE Transelectrica SA with neighboring countries in order to ensuring the balance of the national energy system;

4. The electricity quantity for applying the injection tariff is the electricity delivered by the generation units with installed capacity higher than 5 MW linked to the transmission network and distribution network;

5. Households customers consumption for US regime represents electricity consumption invoiced at regulated and “Competitive Market Component” (CMC) tariff.

4. Transactions’ structure on the wholesale electricity market

The size of wholesale market depends on the sum of all transactions performed by the market players, exceeding the quantities physically transmitted from generation to consumption; the total transactions include also resale transactions made in order to match the contractual obligations and to obtain financial benefit.

When entering into force, the Law no. 123/2012 on Electricity and Natural Gas has set the general principle that energy competitive market and electricity transactions should take place in a transparent, public, centralized and non-discriminatory way. Therefore, all the new transactions have to be the result of participation on the centralized markets administrated by Opcom SA, the only owner of a license issued by ANRE for the electricity market operation in Romania. The centralized markets which are presently functional are DAM (Day Ahead Market), CMBC (centralized market of bilateral contracts with Extended Auction mechanism-EA, with Continuous Negotiation mechanism-CN, with Fuel Processing mechanism -FP), ID (Intraday Market), CM-OTC – (Centralized Market with Double Continuous Negotiation for Electricity Bilateral Contracts), CM-LCM (Large Consumers mechanism) and CMUS (Centralized Market for Universal Service).

Besides the existing centralized markets operated by Opcom SA (which ensure the transparent, public, centralized and non-discriminatory character required by the Law) there still exist bilateral negotiated contracts concluded before the entering into force of the Law still pending, export and import contracts and regulated contracts with regulated quantities and prices, based on ANRE decisions concluded between a number of generators and the suppliers of last resort.

Following the entering into force of the Law no. 23/2014 subsequent to Law no. 220/2008 for establishing the system for promoting producing electricity from renewable energy sources, modified and completed by Law no. 122/2015, a specific range of RES generators may conclude negotiated bilateral contracts as follows:

- those owning power plants that benefit from the promotion system and having installed capacity less than 1 MW/generator and less than 2 MW/generator for biomass high efficiency cogeneration, but only with suppliers for final customers;
- those owning power plants that benefit from the promotion system and having installed capacity between 1 and 3 MW/generator and between 2 and 3 MW/generator for biomass high efficiency cogeneration, but only if they are considered small or medium enterprises, according to the Law no. 346/2004.

The following table presents the volumes traded and the average prices on each type of contracts and on the main components of the wholesale market. The aggregated volumes and the average prices on negotiated contracts are reported by market participants on their own responsibility and except the concluded contracts based on provisions of Law no. 23/2014 they should reflect only the ongoing contracts which had been concluded before Law no. 123/2012 entered into force.

TRANSACTIONS ON THE WHOLESALE MARKET	December 2016	January 2017	January 2016
1. BILATERAL CONTRACTS' MARKET			
traded volume (GWh)	445	288	584
average price (lei/MWh)	134.96	152.65	146.69
% from internal consumption (%)	8.8	5.4	11.7
1.1. Sales on regulated contracts			
traded volume (GWh)	329	220	451
average price (lei/MWh)	131.74	136.31	144.29
% from internal consumption (%)	6.5	4.1	9.0
1.2. Sales on negotiated contracts¹⁾			
traded volume (GWh)	116	68	134
average price (lei/MWh)	144.08	205.95	154.81
% from internal consumption (%)	2.3	1.3	2.7
2. EXPORT			
traded volume (GWh) ²⁾	931	740	875
average price (lei/MWh)	186.06	254.67	179.70
% from internal consumption (%)	18.4	13.9	17.5
3. CENTRALIZED MARKETS OF CONTRACTS			
traded volume (GWh)	6543	5789	5147
average price (lei/MWh)	164.61	170.69	167.44
% from internal consumption (%)	129.1	108.6	103.2
3.1. Extended auction mechanism CMBC-EA³⁾			
traded volume (GWh)	2167	1673	2223
average price (lei/MWh)	162.20	166.00	161.36
% from internal consumption (%)	42.8	31.4	44.6
3.2. Continuous negotiation mechanism CMBC-CN³⁾			
traded volume (GWh)	1536	1245	1077
average price (lei/MWh)	159.59	169.35	173.00
% from internal consumption (%)	30.3	23.3	21.6
3.3. CM-OTC mechanism³⁾			
traded volume (GWh)	2840	2871	1847
average price (lei/MWh)	169.16	174.00	171.50
% from internal consumption (%)	56.0	53.8	37.0
4. CENTRALIZED MARKET FOR UNIVERSAL SERVICE - CMUS			
traded volume (GWh)	771	814	642
average price (lei/MWh)	164.90	174.29	182.83
% from internal consumption (%)	15.2	15.3	12.9
5. DAY AHEAD MARKET			
traded volume (GWh)	2338	2541	2350
average price (lei/MWh) ⁵⁾	194.45	337.74	184.38
% from internal consumption (%)	46.1	47.6	47.1
6. INTRADAY MARKET			
traded volume (GWh)	8.42	15.8	11.4
average price (lei/MWh) ⁵⁾	135.78	226.33	141.53
% from internal consumption (%)	0.2	0.3	0.2
7. BALANCING MARKET			
traded volume (GWh)	512	883	594
% from internal consumption (%)	10.1	16.6	11.9
upward volume (GWh)	411	788	439
average negative imbalance price(lei/MWh)	318.47	511.24	323.57
downward volume (GWh)	100	94	155
average positive imbalance price (lei/MWh)	27.16	154.71	45.71
INTERNAL CONSUMPTION (includes distribution and transmission losses) (GWh)	5070	5332	4989

- Note:
- 1) Supply contracts to final customers and export contracts are not included as they are separately identified;
 - 2) Export volumes and price information correspond to those reported monthly by market participants and include the volumes exported by CNTEE Transelectrica as shipper for coupled DAM; in some cases those volumes are different from those notified in DAMAS platform;
 - 3) The monthly data are presented as reported by the participants for the electricity delivered in the respective month. These information refer both to transactions concluded previously on CMBC and CMBC-NC (ANRE Order 6/2011) and to transactions concluded on CMBC-EA and CMBC-NC (ANRE Order 78/2014) with delivery within the reported month;
 - 4) Price table price is calculated as the average of the hourly market closing price and it is published by Opcom SA. The average monthly price, published by Opcom SA, calculated as weighted average of the hourly market closing price with traded volumes was in January 2017, 338.14 lei/MWh;
 - 5) The average monthly price is calculated based on monthly traded volume and transaction value published by Opcom SA.

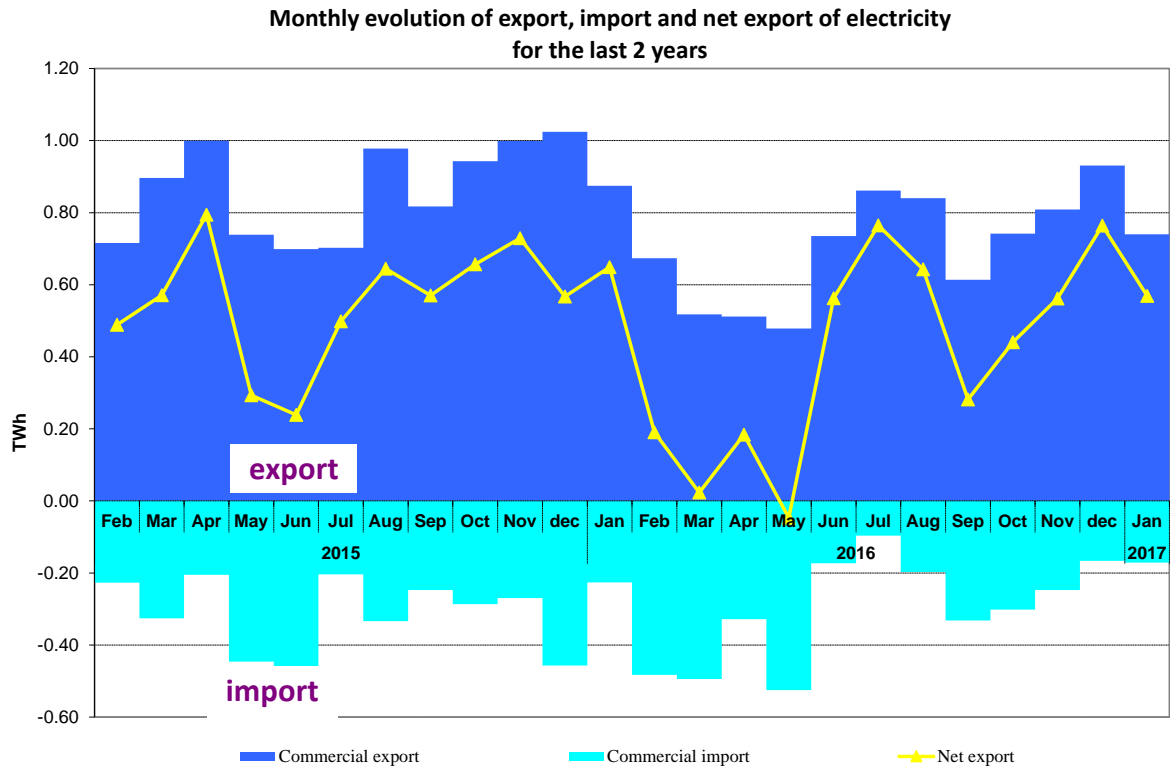

The percentage of electricity quantities from the internal consumption (see table from above) offers a dimensional reference for each of the specified markets. Prices include only the injection component of the transmission tariff, in this way being comparable within a month and making possible the comparison with the previous month. The following graph presents the evolution of the relation between the volumes sold on each market and the estimated internal consumption, since February 2012.

Source: Monthly reports of wholesale market participants. Opcom SA and CNTEE Transelectrica SA – processed by MG

Note: In the above graph, the volumes traded on negotiated contracts' market do not include the export trades.

The following graph presents the monthly values of commercial export (quantities for which the extraction component of transmission tariff was applied), commercial import (quantities for which the injection component of transmission tariff was applied) and the net export (export minus import) during the last 24 months:

Source: Monthly reports of CNTEE Transelectrica SA – processed by MG

The following table presents commercial export and import transactions for electricity extracted/introduced from/in transmission network. These include transaction of CNTEE Transelectrica SA as shipper agent in the price coupling mechanism of DAM, known as 4M MC. Shipper agent role is reflected in physical and commercial transfer of electricity for import/export on the interconnections between Romania and Hungary.

Import/Export Transactions	December 2016	January 2017	January 2016
Export			
traded volume (GWh)	931	740	875
average price (lei/MWh)	186.06	254.67	179.70
% from internal consumption	18.4	13.9	17.5
in which, for coupled DAM			
traded volume (GWh)	105	128	54

The following graph presents the volumes and the monthly average prices on DAM starting with January 2006:

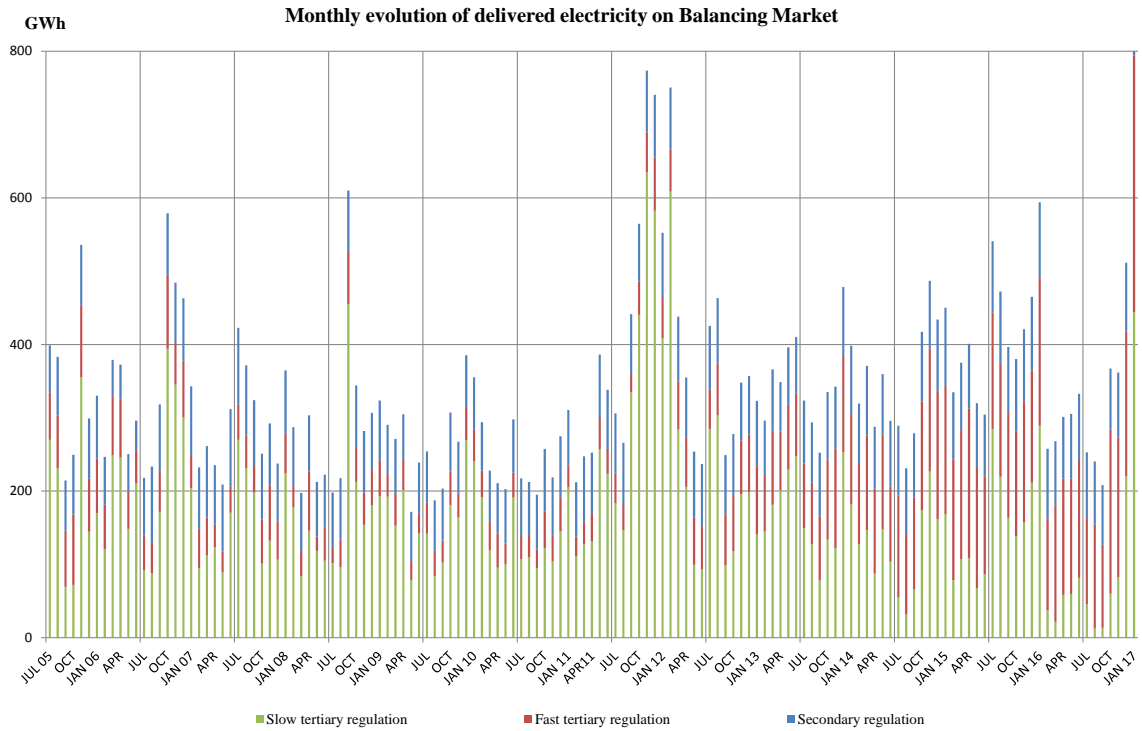

Source: Monthly reports of Opcom SA and CNTEE Transelectrica SA – processed by MG

Balancing electricity is determined by the dispatch orders (accepted offers) received by generators. After settlement, the actual electricity delivered by generators on balancing market is determined based on the measured (approved) values; the relation between the accepted and delivered electricity in January 2017 is presented in the following table:

January 2017	Dispatch order (GWh)	Delivered electricity (GWh)	Deviation (%)
Secondary regulation	88	88	
<i>upward</i>	41	41	
<i>downward</i>	47	47	
Fast tertiary regulation	362	350	3
<i>upward</i>	311	305	2
<i>downward</i>	51	45	11
Slow tertiary regulation	451	444	1
<i>upward</i>	449	443	1
<i>downward</i>	2	2	8
TOTAL	901	883	
<i>upward</i>	801	788	
<i>downward</i>	100	94	
INTERNAL CONSUMPTION		5332	
% share of traded volumes from internal consumption		16.6%

5. Trading structure on the wholesale electricity market of different participant categories

Generators

In January 2017 compared with similar period of 2016, the structure of electricity sales obligations contracted before delivery interval by the electricity generators with dispatchable units was the following:

Transaction type	January 2016	January 2017
Regulated contracts to suppliers of last resort - hydro generator	214.95	74.00
Regulated contracts to suppliers of last resort - nuclear generator	235.65	146.42
Negotiated contracts to suppliers	133.54	67.60
Contracts concluded on Opcom centralized markets:	2884.01	2801.05
CMBC-EA	1578.89	1058.92
CMBC-CN	907.87	940.15
CM-OTC	397.25	801.98
Centralized market for universal service	498.06	454.34
DAM	1672.83	1860.54
Intraday	9.44	10.41
Supply contracts to final customers, from which:	236.18	437.29
Households*	-	0.37
Non-households	236.18	436.91
Total	5884.66	5851.64

Source: Monthly reports of generators – processed by MG

* data on this category started to be collected separately in January 2017

Suppliers

In January 2017, 104 companies with main activity the supply of electricity, concluded transactions on the electricity market; from those, 28 suppliers traded exclusively on the wholesale market and 76 suppliers on both retail and wholesale markets (in this category there are also included the 5 suppliers of last resort which act on both retail and wholesale markets).

Suppliers acting exclusively on WEM

The following table shows the activity for January 2017 of the suppliers acting exclusively on WEM, acquisitions and sales being split by categories of markets participants, compared with similar period of 2016:

Transactions structure of suppliers acting exclusively on WEM	-GWh-	
	January 2016	January 2017
Purchase		
Import	38.44	47.21
Negotiated contracts with generators	38.65	0.00
Contracts concluded on Opcom centralized markets:	1534.66	1605.03
- on CMBC-EA with generators	361.50	132.41
- on CMBC-CN with generators	435.73	499.47
- on CM-OTC with generators	184.58	270.14
- on CMBC-EA with other suppliers	45.21	0.18
- on CMBC-CN with other suppliers	12.85	45.82
- on CM-OTC with other suppliers	494.79	657.00
DAM	172.83	176.26
Intraday market	3.16	1.28
Sales		
Export	538.85	479.03
Contracts concluded on Opcom centralized markets:	828.70	869.11
- on CMBC-CN with generators	0.00	0.08
- on CM-OTC with generators	0.00	17.76
- on CMBC-EA with other suppliers	162.81	52.35
- on CMBC-CN with other suppliers	48.48	135.82
- on CM-OTC with other suppliers	577.78	627.94
- on CMBC-EA with DO	6.14	16.56
- on CMBC-CN with DO	0.01	0.00
- on CM-OTC with DO	33.48	18.60
- on CMBC-EA with TSO	0.00	0.01
CMUS with last resort suppliers	77.41	173.66
DAM	342.30	313.37
Intraday market	1.36	3.84

Source: Monthly reports of suppliers – processed by MG

In addition to the data from the table above, the following graph presents the minimum, average and maximum actual prices by categories of transactions completed by the suppliers acting exclusively on WEM (traders) in January 2017.

Source: Monthly reports of the competitive suppliers– processed by MG

Active suppliers on REM (the suppliers of last resort are not included)

The following table presents aggregated information on transactions volume and structure for suppliers providing electricity to final customers, on the competitive market, for January 2017 compared with similar period of 2016:

Transactions' structure of suppliers acting on REM (suppliers of last resort excluded)	January 2016	January 2017
-GWh-		
Purchase		
Import	6.36	0.53

Suppliers of last resort

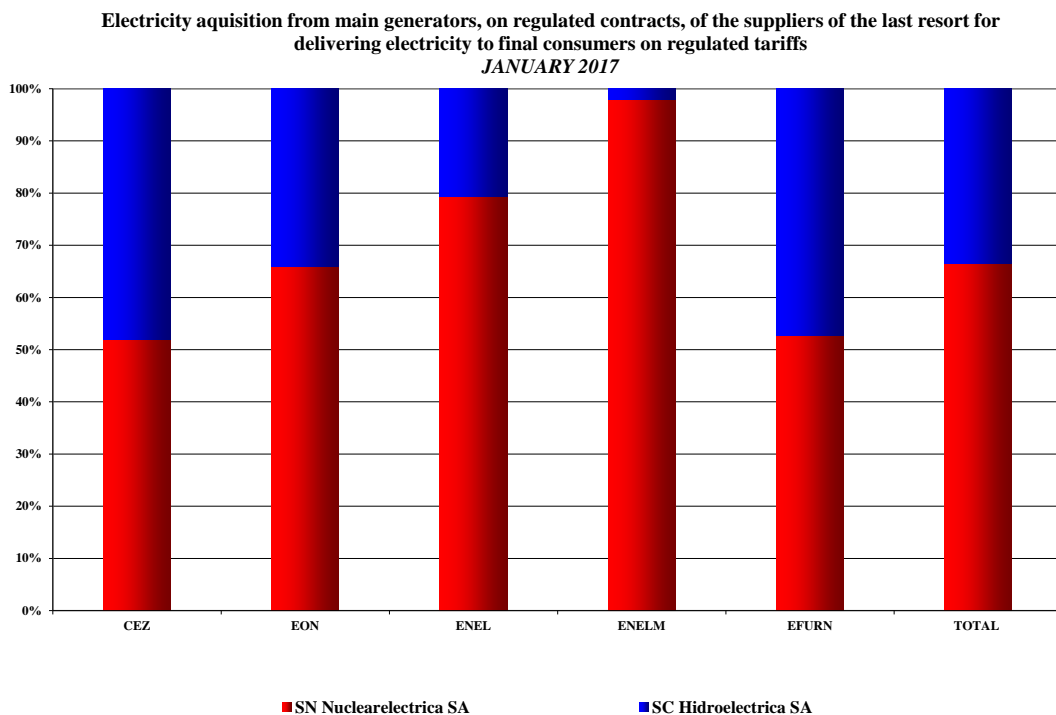

Electricity transactions structure of suppliers of last resort (before the delivery interval), for supplying the customers under SU and UI regime, is presented in the table below, for January 2017 compared to similar period of 2016:

- GWh -

Transactions structure of suppliers of last resort for supplying the customers in SU and UI regime	January 2016	January 2017
Regulated contracts with generators	450.60	220.42
Negotiated contracts with undispachable generators (L23/2014 and L122/2015)*	0.02	0.01
Contracts concluded on Opcom centralized markets:	30.64	31.23
- contracts on CMBC-EA with generators	15.57	13.73
- contracts on CMBC-CN with generators	12.63	0.05
- contracts on CM-OTC with generators	0.95	0.08
- contracts on CMBC-EA with other suppliers	0.47	5.82
- contracts on CMBC-CN with other suppliers	0.10	3.84
- contracts on CM-OTC with other suppliers	0.93	7.69
Centralized market for universal service:	642.06	814.04
- contracts on CMUS with generators	498.06	454.34
- contracts on CMUS with suppliers	144.00	359.71
Transactions concluded on DAM:	253.28	129.77
- purchase	274.53	142.04
- sales	21.25	12.27

*negotiated trades concluded with undispachable generators which may conclude contracts according to Law 23/2014 provisions, with subsequent changes and additions of Law no. 122/2015, both Laws subsequent to Law no. 220/2008

The structure of the electricity purchased by the suppliers of last resort from the main generators on regulated contracts is presented in the following graph for January 2017:

Source: Monthly reports of the suppliers of last resort – processed by MG

The suppliers of last resort separately display in the bills of their customers the “Competitive Market Component” (CMC). This tariff component was proposed by each supplier of last resort and finally approved by ANRE. In accordance with the provisions of ANRE Order no. 83/2013 for approving the Methodology to set up prices and tariffs to the final customers who choose not to exercise their

eligibility rights. Since July 01 2013, CMC is separately highlighted within the household invoice. In order to reduce the gap between acquisition prices of electricity bought for covering the consumption at CMC tariffs, ANRE approved in July 2014 the regulatory framework for the Centralised Market for Universal Service (CMUS). This centralised market, operated by OPCOM became operational in April 2015 by implementing the trading mechanism. Consequently, the acquisition process of the forecasted demand to be invoiced with CMC tariffs is made in a centralised manner on CMUS and the difference between invoiced and forecasted demand is to be covered from DAM. The demand of final customers who are delivered in last resort regime is to be covered from the centralised markets – CMBC-EA, CMBC-CN, CM-OTC, DAM and ID.

The following table presents the electricity acquisition structure of suppliers of last resort for US (before the delivery interval) for January 2017 compared to similar previous period:

-GWh-

Transactions' structure of suppliers of last resort for universal service	January 2016		January 2017	
	Quantity [GWh]	Average price [lei/MWh]	Quantity [GWh]	Average price [lei/MWh]
Contracts concluded on CMUS:	642.06	182.83	814.04	174.29
- contracts on CMUS with generators	498.06	181.65	454.34	176.38
- contracts on CMUS with suppliers	144.00	186.90	359.71	171.65
Transactions concluded on DAM:	136.44	-	86.08	-
- purchase	143.37	206.33	96.41	347.61
- sales	6.92	167.83	10.33	295.96
TOTAL	778.50	187.29	900.12	191.46

The following table presents the electricity acquisition structure of suppliers of last resort (before the delivery interval) corresponding to the competitive REM (energy supplied at negotiated prices to the customers who renounced to regulated tariffs) for January 2017 compared to similar previous period:

Transactions' structure of suppliers of last resort for the competitive segment of REM	January 2016	January 2017
Purchase		
Contracts concluded on Opcom centralized markets:	716.60	548.97
- on CMBC-EA with generators	323.66	101.92
- on CMBC-CN with generators	163.12	45.66
- on CM-OTC with generators	61.91	141.28
- on CMBC-EA with other suppliers	52.08	12.22
- on CMBC-CN with other suppliers	31.92	100.55
- on CM-OTC with other suppliers	83.91	147.34
Negotiated contracts with undispachable generators (others than L23/2014 and L122/2015)*	5.99	0.00
Negotiated contracts with undispachable generators (L23/2014 and L122/2015)**	0.00	9.10
DAM	307.57	587.07
Sales

 **negotiated trades concluded with undispatchable generators which may conclude contracts according to Law 23/2014 provisions, with subsequent changes and additions of Law no. 122/2015, both Laws subsequent to Law no. 220/2008
 *** data on this category started to be collected separately in January 2017

The structure by types of sources/destinations of the traded volumes combined with the actual average prices of the suppliers of last resort corresponding to the competitive segment of REM is presented in the following graph for January 2017:

Source: Monthly reports of the suppliers of last resort – processed by MG
 Note: clarifications were requested from the supplier of last resort who reported negative price

Main distribution operators

The following table shows the electricity acquisition structure of main distribution operators (before the delivery interval), for covering the distribution network losses, for January 2017 compared with similar previous period:

Transactions' structure	January 2016	January 2017
Contracts concluded on Opcom centralized markets:	467.93	514.15
- CMBC-EA with generators	169.50	162.81
- CMBC-CN with generators	24.42	52.07
- CM-OTC with generators	14.88	3.72
- CMBC-EA with suppliers	223.67	276.96
- CMBC-CN with suppliers	1.99	0.00
- CM-OTC with suppliers	33.48	18.60
Transactions concluded on Intraday market	0.00	0.93
Transactions concluded on DAM:	244.53	196.13
- purchase	250.44	196.14
- sales	5.91	0.01

The electricity purchased for covering their network losses is presented in detail in the following graph, for January 2017:

Electricity acquisition of distribution operators for covering the distribution losses
January 2017

Source: Monthly reports of the distribution operators – processed by MG

6. Concentration indicators on the wholesale electricity market and its components

According to the economic theory and the EU documents, the following market concentration indicators may be defined:

- HHI. Herfindahl-Hirschman Index = sum of square market shares (%) of participants:

The indicator values signify:

HHI < 1000 non-concentrated market;
 1000 < HHI < 1800 moderately concentrated market;
 HHI > 1800 highly concentrated market.

- C1 = market share of the main market participant (%)

The indicator values signify:

C1 > 20% alarming concentrated market;
 C1 > 40% suggests the existence of a dominant position;
 C1 > 50% clearly indicates a dominant position.

- C3 = sum of market shares of the main three participants in the market (%):

The indicator values signify:

40% < C3 < 70% moderately concentrated market;
 C3 > 70% highly concentrated market.

These concentration indicators may be defined for the wholesale market (electricity market or ancillary services market) or for each of its components where direct competition takes place.

Concentration indicators and market shares of the electricity generators

The market structure regarding the electricity generation offers an initial basis for analyzing the possible competitiveness level of the electricity market.

The following graph shows the dispatchable generators market shares for the first month of the year 2017.

Source: Monthly reports of generators – processed by MG

A component of the WEM on which direct competition between generators exists is the Balancing Market (BM). The values of concentration indicators on this market are determined based on effectively delivered electricity, for each type of regulation defined within the Commercial Code, and they are presented in the following table for January 2017:

Structure/concentration indicators of BM - January 2017 -	Regulation					
	Secondary		Fast tertiary		Slow tertiary	
	upward	downward	upward	downward	upward	downward
C1 - % -	57	57	91	49	31	76
C3 - % -	97	96	97	95	77	94
HHI	4580	4534	8386	3542	2263	5955

Source: Monthly reports of CNTEE Transelectrica SA – processed by MG

In order to maintain the level of security in the NES functioning, due to significant increase of the number of RES generators, Ancillary Services are ensured both on market mechanisms and regulated contracts. Based on GD no. 941/2014 provisions for modifying art. no. 4 of GD no. 138/2013 regarding approving some measures for electricity supplying security and for extension of a term, they were established regulated quantities for secondary, fast tertiary and slow tertiary reserves.

Besides that, CNTEE Transelectrica SA has organised auctions for acquiring reserves on the competitive component for secondary reserve, fast tertiary and slow tertiary reserve.

The relationship between regulated and competitive components on the Ancillary Services Market (ASM) as well as the main concentration indicators on each type of reserve (secondary, fast tertiary and slow tertiary) are presented in the following table, for January 2017.

Concentration indicators on ASM - January 2017 -		Secondary reserve	Fast tertiary reserve	Slow tertiary reserve
regulated component	contracted quantity (h*MW)	14880	14880	481440
	C1 (%)	73.1	83.9	71.1
	C3 (%)	100.0	100.0	91.9
competitive component	contracted quantity (h*MW)	313720	499720	178560
	C1 (%)	60.2	81.4	48.1
	C3 (%)	100.0	93.7	99.1
	HHI	4921	6725	3674

Source: Monthly reports of CNTEE Transelectrica SA – processed by MG

Concentration Indexes for the Day Ahead Market

Day Ahead Market (DAM) is a voluntary market, opened both for buying and selling for all types of market participants: generators, suppliers, grid operators, under applicable regulations.

The concentration indicators on DAM reflects the level of competition between sellers and between buyers respectively, the dynamics of both influencing the price level. The following table presents C1, C3 and HHI for buying and for selling side of DAM based on quantities traded by participants on this market.

Concentration indicators on DAM - January 2017 -	C1 (%)	C3 (%)	HHI
Selling	14.63	34.53	591
Buying	17.34	35.72	693

Source: Monthly reports of Opcom SA – processed by MG

7. Price evolution on wholesale electricity market

Starting with November 2014 the Romanian DAM is working coupled with the spot markets from Hungary, Slovakia and Czech Republic based on the price coupling mechanism, project known as 4M MC. This coordinated correlation mechanism uses an unique European method for price coupling of regions (called *Price Coupling of Regions - PCR*-initiative) in order to fulfil the harmonization of national european markets and create the internal european electricity market.

The functioning of these spot markets is based on coupling algorithm recommended by ACER (Euphemia) and its goal is maximizing the social welfare to the entire area of the coupled markets.

The coupling mechanism is accomplished through the operators OTE-Czech Republic and EPEX Spot (both of them, stock members of PCR initiative), the last one operating as services supplier for OKTE-Slovakia, HUPX-Hungary (which is not a PCR member) and Opcom-Romania (who became PCR member from 1st January 2016). Coupling operators are acting as Coordinators on a monthly rotation basis.

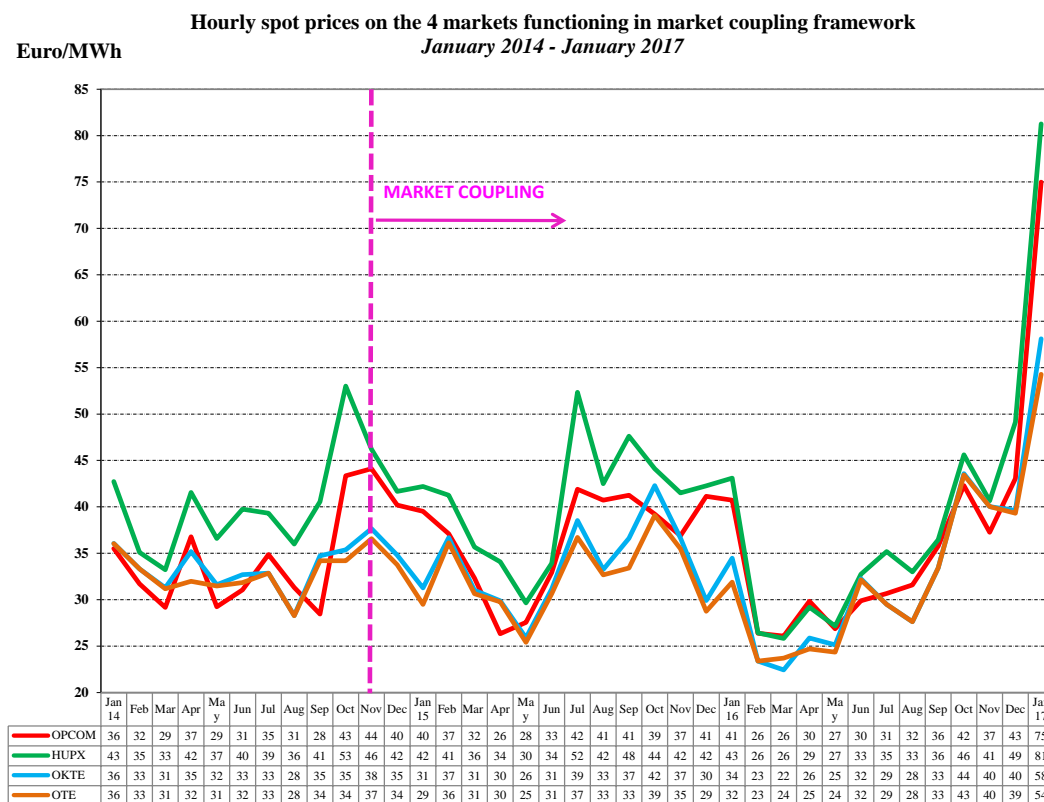

According to EU legislation, coordinated cross border capacity allocation is under the governance of the transmission system operators from the 4 countries and the allocation model to be used is the default allocation on DAM of the available interconnection capacity.

To better meet the purpose of DAM coupling mechanism - electricity transfer at level and direction based on generation and consumption conditions and dependent on the coupled DAM prices - starting with 1st January 2016, TSO operators from Romania and Hungary (CNTEE Transelectrica SA and Mavir ZRt) agreed to reserve a quota from interconnection capacity for DAM allocation based on the authorities recommendations from both countries, ANRE and MEKH. The same rule was adopted for interconnection capacity allocation on Bulgarian border.

Thus, for each month of the year, reserved capacity for DAM allocation is determined as a difference between monthly ATC for each subperiod and 80% from the lowest value between the ATC resulted for subperiods of the month, incremented with the already allocated capacity at the yearly auction but which has been returned to TSO.

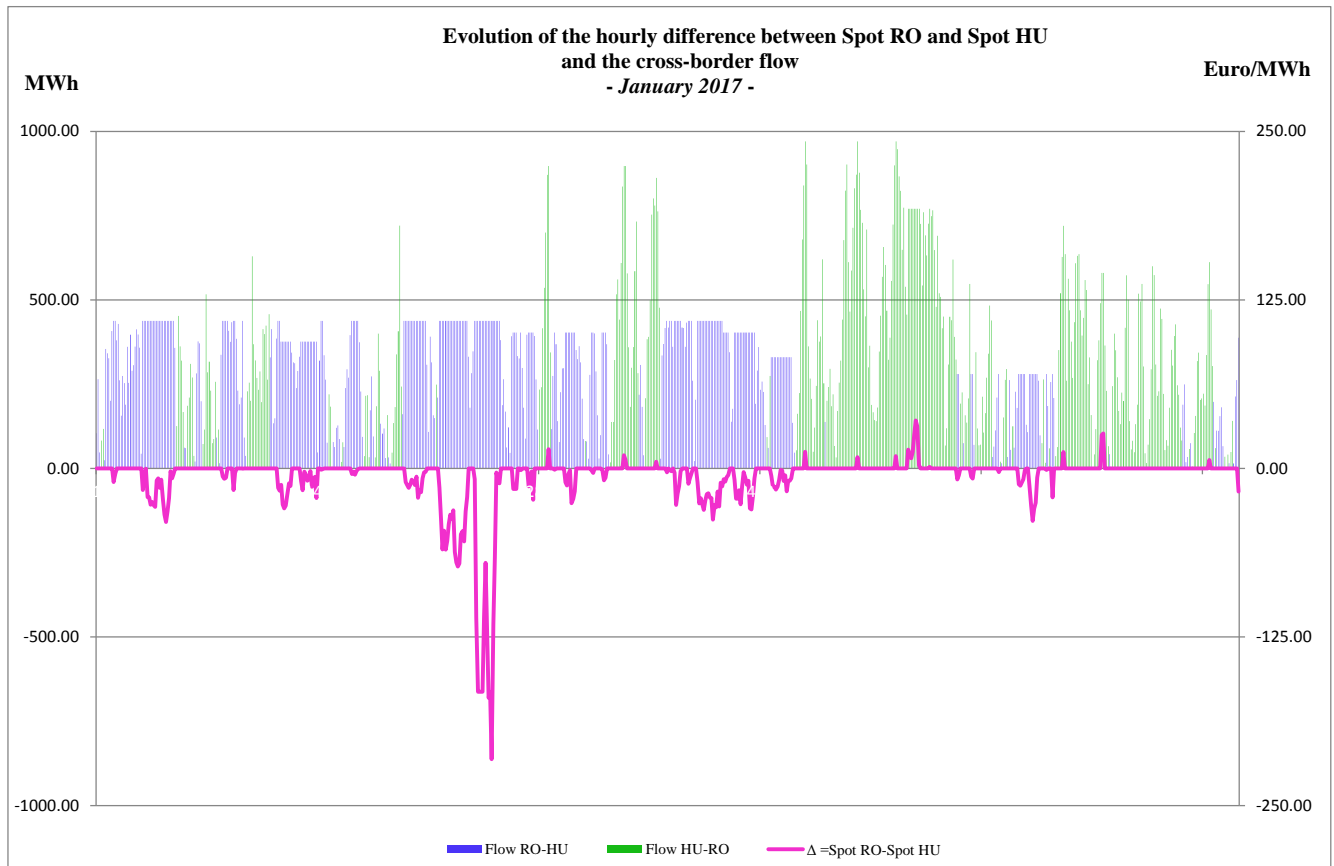

Particularly, for Hungarian border, if 80% from the lowest value of the ATC resulted for monthly subperiods is lower than 80 MW, ATC for monthly allocation will be 80% from the ATC calculated for each subperiod incremented with the already allocated capacity at the yearly auction but which has been returned to TSO.

Next graph presents the monthly spot prices of the 4 markets involved in the coupling mechanism starting with January 2014, before and after the start of operational phase.

Source: Monthly reports of Opcom SA – processed by MG

The following graph presents the evolution of January 2017 hourly gap between DAM prices in Romania and Hungary as a result of the functioning of coupled markets, correlated with the cross border flows RO-HU for both directions.

Source: Data published by Opcom SA – processed by MG

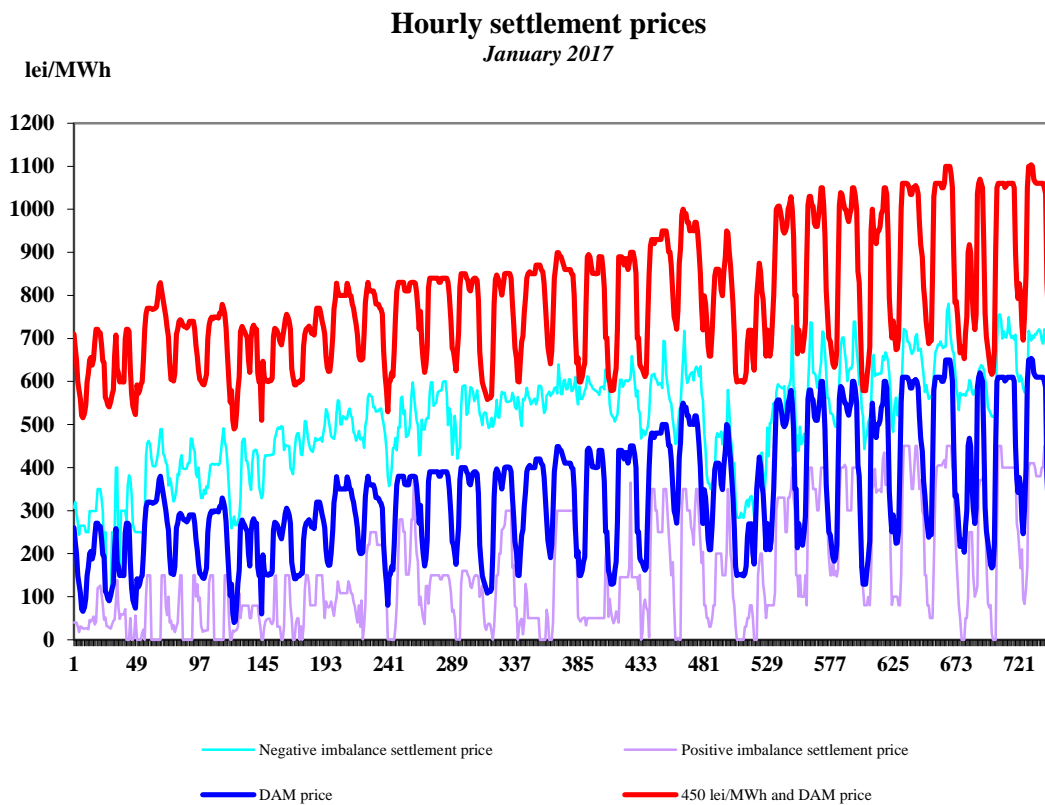

The following graph presents the evolution of weekly average spot prices starting with July 2005:

Source: Daily reports of Opcom SA – processed by MG

In order to cover the differences between planned/contracted amounts of consumption/ generation and the real time consumption, the system operator (CNTEE Transelectrica SA) operates the BM by buying or "selling" electricity at prices determined by the merit order of dispatchable generators' offers. The participants generating imbalances, grouped in BRPs, have to bear the imbalances costs. For the negative imbalances, they have to pay the settlement price resulting from the upward bids accepted on the BM, while for the positive imbalances they receive the settlement price resulting from the downward bids accepted on the BM.

The settlement prices (MCP on DAM, negative imbalance settlement price and positive imbalance settlement price) are represented on the same graph, showing the two markets correlation degree. In the first graph the prices are expressed in hourly values, in the second graph in hourly average values compared to internal consumption, and in the last graph in average monthly values.

III. RETAIL ELECTRICITY MARKET

1. Structure of the retail electricity market

* according to art. 53 (2) and art. 55 (1) from Electricity and Gas Law no. 123/2012

2. Electricity market opening degree

The following graph contains the quota of the consumption from total consumption, of the customers who switched their supplier or renegotiated their contracts with the suppliers operating on the regulated market, between January 2004 – January 2017. The values presented are cumulated from the beginning of the opening process and are presented monthly:

Opening degree evolution of electricity market
January 2004 - January 2017

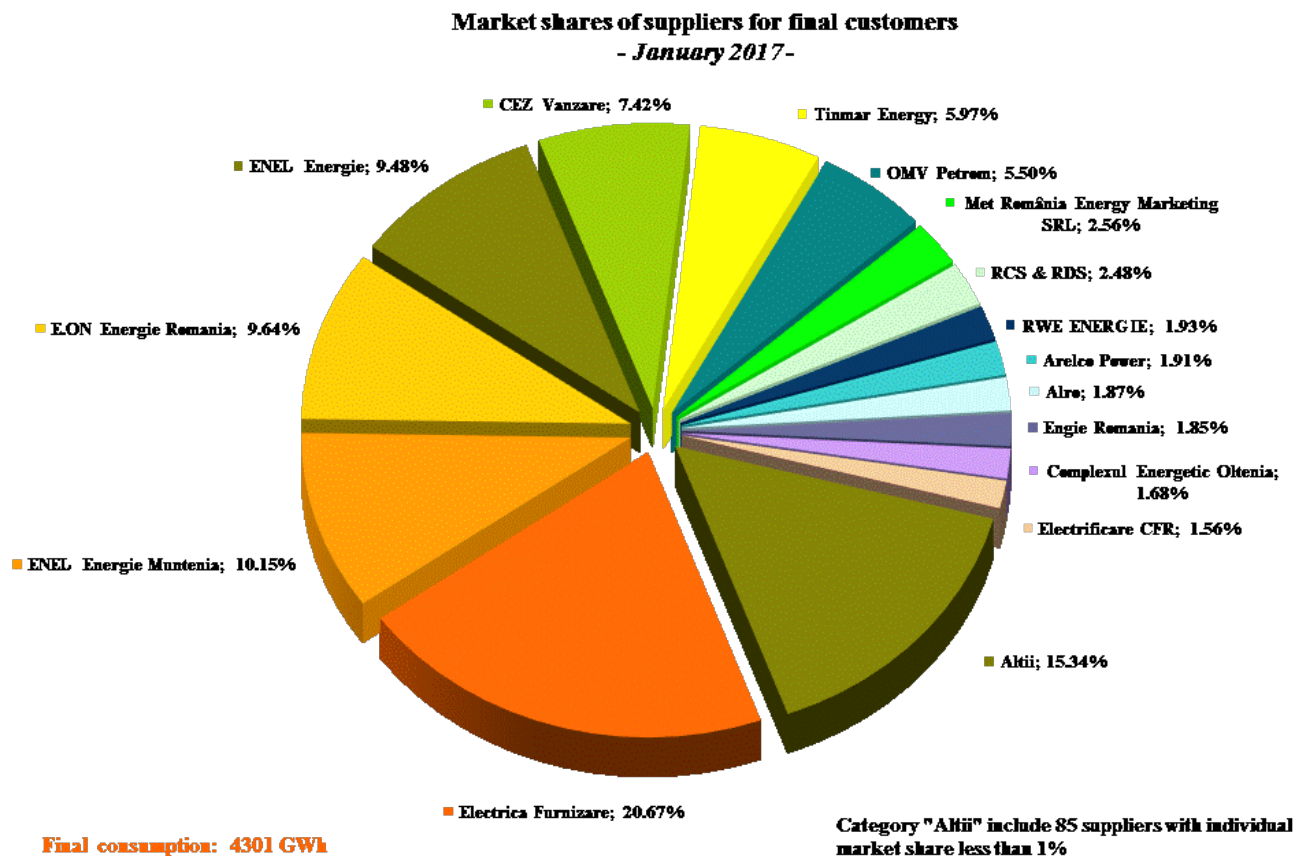

Source: Monthly reports of the final customers' suppliers – processed by MG

3. Market shares of the electricity suppliers

In the following three graphs there are presented the market shares of electricity suppliers on the retail market, calculated:

- a) for all suppliers acting on REM, including the suppliers of last resort, based on the electricity supplied to the final customers (on regulated, Competitive Market Component and last resort tariffs) in US and last resort regime, as well as to the customers who switched their supplier or renegotiated their contract;

Source: Monthly reports of suppliers for final customers– processed by MG

- b) for suppliers of last resort - based on the electricity supplied to the final customers in US and last resort regime;

**Market shares of suppliers of last resort on US and last resort regime
- January 2017 -**

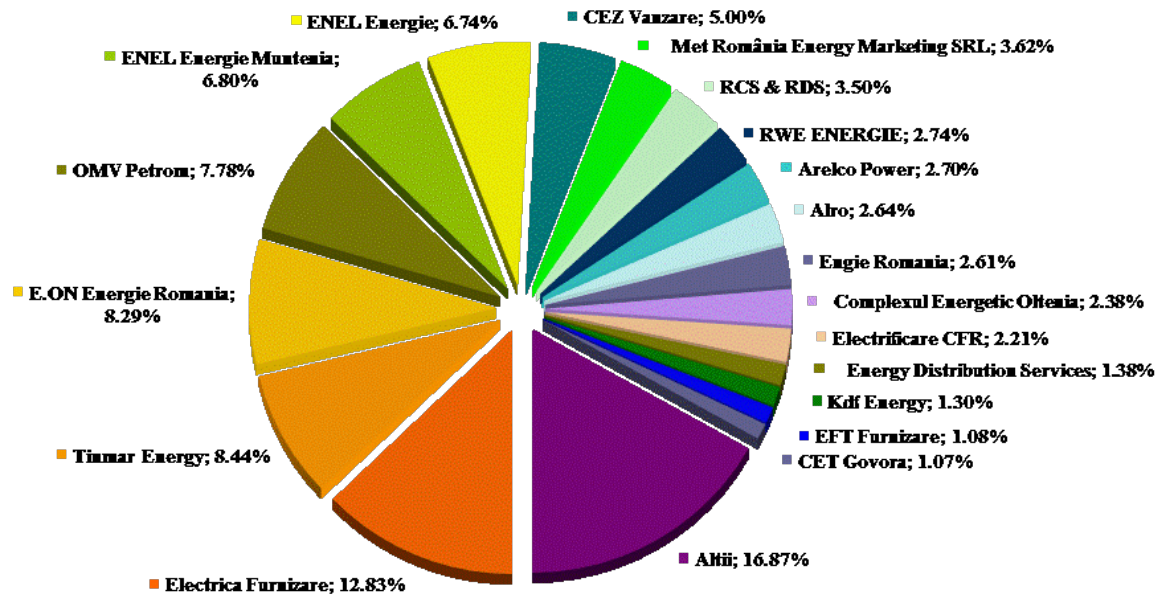

Consumption of customers supplied at regulated, CMC and last resort tariffs: 1262 GWh

Source: Monthly reports of the suppliers of last resort – processed by MG

- c) for all suppliers (including the suppliers of last resort) based on the electricity supplied for the customers at negotiated prices on competitive component of REM:

Market shares of suppliers delivering electricity on the competitive market
- January 2017-

Consumption on competitive market: 3040 GWh
Structure indicators:
HHI - 562; C3 - 30%; C1 - 17%

Category "Alții" includes 81 suppliers with individual market share less than 1%

Source: Monthly reports of the competitive suppliers– processed by MG

The values of market indicators were calculated without taking into consideration the dominance principle. The delivered electricity used for determining the market share of each supplier comprises the self-consumption of the largest industrial customer which owns a supply license and based on it acquired its electricity from the WEM as a competitive supplier.

The electricity supplied to the final customers used for calculating the market share of every supplier includes also the self-consumption of that particular supplier (e.g. customers with supply license who buy electricity for themselves from WEM as competitive suppliers).

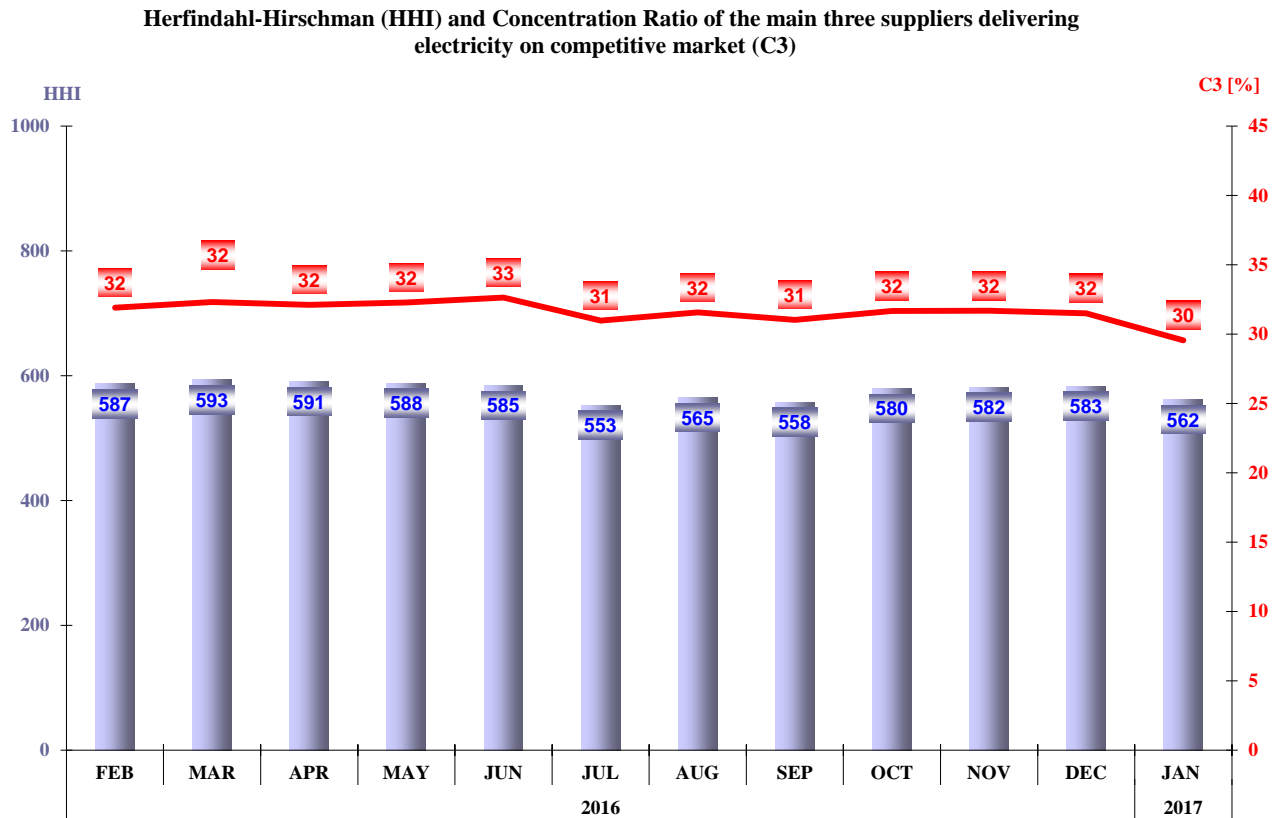

The analysis of the competitive suppliers' activity on the competitive REM component compared to their activity on the WEM is developed based on the weight of the electricity sold to final customers in total electricity sales. The table below presents the number of suppliers acting on the REM, grouped into categories of sales weight during January 2017:

Number of suppliers	Share of sales to final customers from total sales transactions			
	100%	75% - 100%	50% - 75%	<50%
Competitive	16	15	10	30
Of last resort	3	2	0	0

Source: Monthly reports of the suppliers– processed by MG

4. Concentration indicators of the competitive retail electricity market

The monthly evolution of concentration indicators (C3, HHI) determined on the competitive component of the REM is presented for January 2017 in the following graph:

Source: Monthly reports of the suppliers – processed by MG

The table below shows the values of structure indicators of competitive component of REM for and the number of active suppliers in January 2017, calculated for each non-household and household customer categories as defined by the Regulation (EU) 2016/1952 of the European Parliament and of the Council:

Indicators - Jan 2017	Consumption tranches - Non-household customers							
	IA	IB	IC	ID	IE	IF	IG	Total
C1 - % -	32	26	20	12	18	14	28	13
C3 - % -	71	53	41	32	41	36	47	30
HHI	1980	1315	863	584	818	862	1213	558
Consumption - GWh -	118	418	327	728	417	225	748	2982
No. of SUPPLIERS	74	81	70	68	28	16	19	96
No. of suppliers of last resort	0	5	5	5	5	3	4	5
No. of competitive suppliers	61	62	55	54	21	10	9	70
No. of producers	13	14	10	9	2	3	6	21

5. Evolution of customers' number and of electricity delivered

Number of customers supplied on the competitive market is presented as an evolution over the last 12 months; for January 2017 this number is split into categories, according to the provisions of Regulation (EU) 2016/1952 of the European Parliament and of the Council. The tables below presents the bands of consumption of each category of non-household and household customers:

Non-household customers	Annual electricity consumption (MWh):	
IA		<20
IB	>=20	<500
IC	>=500	<2000
ID	>=2000	<20000
IE	>=20000	<70000
IF	>=70000	<150000
IG	>=150000	

Household customers	Annual electricity consumption (kWh):	
DA		<1000
DB	>=1000	<2500
DC	>=2500	<5000
DD	>=5000	<15000
DE	>=15000

Sales of the competitive suppliers to final household customers on the competitive component of REM, is presented in the following table:

No.	Reporting month	Supplied electricity		Household customers no.	
		Total, of which: [MWh]	suppliers of last resort [MWh]	Total, of which	suppliers of last resort
1	January 2017	57851	46109	272278	108178

6. Average selling prices of customers supplied on the competitive market

The following graph presents the average selling prices of customers supplied on the competitive market, based on the structure defined according to the Regulation (EU) 2016/1952 of the European Parliament and of the Council for January 2017.

Average price and energy consumption for non-household customers' tranches on competitive segment of REM
- January 2017 -

Source: Monthly reports of the competitive suppliers – processed by MG

Average price and energy consumption for household customers' tranches on competitive segment of REM
- January 2017 -

Source: Monthly reports of the competitive suppliers – processed by MG

Note: The average selling price on each category was calculated as weighted average of prices applied by suppliers with quantities supplied according to the provisions of the European Regulation. The average prices do not include VAT, excise or other taxes but include the corresponding services (transmission, system services, distribution tariffs, imbalance, BRP aggregated tax, metering). Splitting customers into categories was based on their annual consumption forecast, according to the provisions of above mentioned Regulation.

IV. TRANSMISSION AND SYSTEM OPERATOR CNTEE TRANSELECTRICA S.A.

TSO performs the electricity transmission service at regulated tariffs, differentiated by separate tariff zones, depending on the impact of injection or extraction of electricity in/from transmission grid upon NES functioning regime.

Compared to the previous method of establishing the transmission zonal tariffs, which aimed to offer locational signals, starting with July 2015 the methodological principles were modified in order to comply with EU regulations and ACER recommendations in this field. Following this, the injection tariff covers only the network losses costs with different zonal tariffs, while the extraction tariff covers the average cost of transmission service.

The following graph presents the structure of CNTEE Tranelectrica SA revenues from performing the transmission services and reflects the structure of its clients benefiting from this type of service in January 2017.

**CNTEE Tranelectrica SA structure of revenues from transmission services
- January 2017 -**

* for electricity extracted from their own licence areas as well as from other areas

** includes the electricity with which some distribution operators supply their own self-consumption places

Source: Monthly reports of CNTEE Tranelectrica SA – processed by MG

In order to perform the system operator tasks, CNTEE Tranelectrica SA assesses and contracts reserves (ancillary services) from qualified generators, which are integrated on BM. The ancillary services which may be used are reserves for secondary, fast tertiary, slow tertiary regulation and reactive energy.

The following graph represents the cost evolution of ancillary services acquisition which were paid by the transmission and system operator starting with January 2012. The tariffs applied for this type of services may be regulated (for the quantities approved through decision by ANRE) and/or competitive (in case the TSO organizes competitive sessions).

Structure of CNTEE Tranelectrica SA costs with ancillary services acquired from qualified generators

V. EVOLUTION OF MARKET RULES IN JANUARY 2017

In January 2017, ANRE issued the following regulations with impact on the wholesale and retail electricity markets:

- ANRE Decision no. 57/2017 on approving the quantities produced in highly efficient cogeneration units which benefit of bonus scheme in December 2016.

VI. EXPLANATIONS AND ABBREVIATION

1. Explanations

- *Electricity delivered into the grid* includes also the own consumption of auto-generators such as RAAN and OMV Petrom together with the electricity sold by the generators through direct lines or consumed by themselves at other consumption sites.

- *Self-consumption of generators* – in the graph regarding the revenues of CN Transelectrica SA the self-consumption exclusively represents the generators consumption at consumption places other than the generation sites.
- *Internal consumption* represents the electricity covered by the wholesale market participants and calculated as *Delivered electricity + Import – Export*.
- *Consumption of final customers on regulated market* represents the consumption of customers supplied at regulated tariffs and CMC by suppliers of last resort.
- *Consumption of final customers on competitive market* represents the consumption of customers supplied at negotiated prices.
- *Fuel consumption* represents the fuel consumed for generating electricity and heat.
- *Competitive supplier* represents the supplier which is active on the competitive retail market.

2. Abbreviation

- MG – Monitoring Group
- WEM – Wholesale Electricity Market
- REM – Retail Electricity Market
- CMBC – Centralised Market of Bilateral Contracts
- CMC – Competitive Market Component
- DAM – Day Ahead Market
- ID – Intraday Market
- BM – Balancing Market
- MCP – Market Clearing Price
- PCSU – Centralised Market of Universal Service (Romanian abbreviation)
- 4M MC – Price coupling mechanism for spot markets from Romania, Hungary, Slovakia and Czech Republic
- BRP – Balancing Responsible Party
- TG/TL – injection / extraction component of the transmission tariff
- OU-NPD – Operational Unit-National Power Dispatch
- US – Universal Service
- DO – Distribution operator
- SLR – Supplier of last resort
- ATC – Available Transmission Capacity
